

# Executive Dashboard for the Retail Sales & Store Performance

The Executive Dashboard enables district managers to have wireless access to sales data on the BlackBerry handheld. Managers can drill down from division, to region, to store and to department. They can view sales by day, week, month, quarter and year, and compare performance versus "the plan". And data gets refreshed automatically.

With all the latest store sales data on the BlackBerry handheld, district managers can improve decision making, better set priorities and focus their time on those stores that need immediate attention.

- No wireless connection is required to run the application as sales data resides on the BlackBerry handheld and managers can access data virtually all the time, even when away from wireless coverage.
- Provides tremendous data storage as managers can store 50,000 records on the BlackBerry handheld.
- Offers automatic data updates and end-to-end security as Vaultus continually pushes the latest data out to the BlackBerry handheld and uses Triple DES encryption.
