

Cardio@nywhere

VaaSah Inc. is developing applications in the area of mobile care for ambulatory patients (hypertension, cardiac monitoring)—based on BlackBerry technology. VaaSah Cardio @nywhere uses the BlackBerry 7100 device to connect with one partner's heart monitoring wearable devices and deliver exceptions/alerts for cardiac events to the nurse as well as the cardiologist from VaaSah's intelligent context engine in the data center.

VaaSah is an innovator in the field of intelligent mobile telemedicine solutions for patient self-care. VaaSah is focused on the development of e-health solutions that enable healthcare insurers/payers to implement Pay-for-Performance healthcare payment systems by providing automated electronic record of care and tracking ongoing patient health outcomes data that integrate seamlessly into an electronic health record.

- The company's software products empower the patient to improve their medical outcome by placing software-driven medical expertise, personalized disease management coaching and relevant health information into their hands so that they can change their behavior and improve their health.
- VaaSah enables hospitals to provide a high level of care and safety beyond the hospital for patients with costly, chronic medical conditions, thereby saving millions in hospitalization costs.
