

MData®, the industry's leading mobile information system, leverages hospitals' existing I.T. infrastructure to provide ease of integration and scalability, while maximizing adoption through a intuitive, easy-to-use interface.

Through improvements in clinical workflow and efficiency, MData enables hospitals to enhance patient care, decrease medical errors, and shorten length of stay.

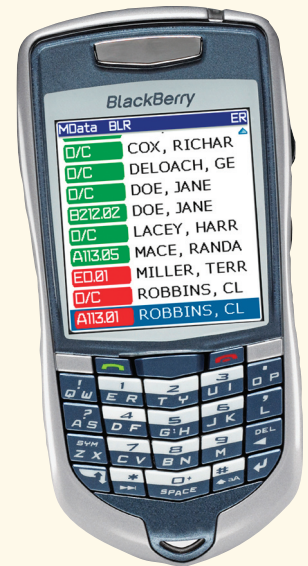

MData Enterprise

MData Mobile

Capitalizes on the mobility and functionality of today's mobile devices. It delivers comprehensive patient information to the clinician where, when, and how it is needed, while also offering additional functionality through robust enterprise modules.

MData Desktop

A web-based application, offers clinicians real-time access to patient information from any desktop or tablet PC. Its unique tracking board provides an intuitive group view of clinical information and incorporates push technology to alert caregivers to new data the very moment it becomes available in the system.

Enterprise Modules

MData CareFocus™

Customizable profiling engine utilizes hospital defined clinical logic to identify high-risk patient populations.

MData Charge Capture

Enables physicians to quickly record and transmit procedure and diagnosis codes relevant to hospital encounters for improved revenue capture.

MData ESign

Empowers physicians to easily view active orders, and sign new orders and transcribed reports.

MData Handoff

Improves communication and collaboration among care team members with a highly-visible and centralized exchange of information and tasks.

MData Schedule

Gives physicians a view into their daily schedule from a mobile device, along with relevant clinical information for the encounter.

About MercuryMD

MercuryMD is a private, healthcare-focused software company that provides healthcare providers with mobile solutions to improve clinical workflows and operational efficiencies. It offers hospitals and physicians a technology foundation to provide ubiquitous access to current and comprehensive clinical information in addition to a full suite of enterprise applications that enable clinicians to transform information into action.
