

BlackBerry Desktop

ENABLE SECURE REMOTE CONNECTIVITY FROM ANY
WINDOWS 10 OR MACOS DEVICE

Maximized Productivity. Reduced Costs. Unparalleled Security.

With BlackBerry Desktop, you can give your users **secure access to email, corporate websites, servers, content, and files** on their personal or non-corporate managed Windows 10 and macOS devices. You can simplify bring-your-own-computer (BYOC) programs in your organization, and extend productivity to both traditional and non-traditional employees – including contractors, remote workers, and external partners.

We can also help you **save on hardware, software, provisioning, and help desk costs** for your enterprise. You can integrate BlackBerry Desktop easily with your existing Microsoft Office on-prem or Microsoft 365 investments. Our solutions enable complete business productivity across endpoints to all your users, **without the need for VPN or VDI, complex hardware, certificates and authentication, or complicated sign-in procedures.**

Reach More Endpoints with Simple Onboarding and Offboarding

BlackBerry Desktop enables the modern enterprise to reach more endpoints by providing a turnkey way to quickly onboard or offboard contractors, partners, non-employees, and home workers.

Provisioning any user is simple. IT can onboard any user by providing a simple access key. After activation, the user can then access all corporate resources with a single sign-on on to BlackBerry Apps on their computer, separate from their personal apps. IT can also easily wipe all corporate data from the device, such as at the end of a contract or in the event of an emergency – without having to worry about a complex enrollment and deprovisioning process.

Full Business Productivity from Non-Corporate Managed Computers and Tablets

Users can securely work with their corporate tools and cloud apps anytime, from any device of their choice. Best of all, they have the same set of capabilities that they would have with a traditional corporate-owned and managed computer.

Email: Effortlessly create business emails with the ability to accept/decline meeting invites from the inbox, **compose rich emails, perform spell checks.**

Calendar: Easily manage business calendar and utilize the free/busy lookup capability to align with everyone's schedules.

Documents: While online, download or open files, edit them straight from the secure browser – **offline with built in secure document editor and online with office web apps,** and email them to colleagues.

Contacts: Reach any of your corporate Active Directory contacts with ease. Contacts History and GAL information all with a single click.

Office 365 Apps: Work with your Microsoft® Office 365® apps online so you can always collaborate with the right business tools.

Intranet Websites: Access intranet sites and manage bookmarks, history, and downloads so that content is always within reach.

Cloud-Based Business Apps: Easily access file-based apps, dashboards, reporting tools, and more such as Salesforce.com, Workday, Expensify, SuccessFactors, Bloomberg, etc.

File Sharing: Share and sync files both inside and outside your organization. With the following BlackBerry products, users can utilize these rich capabilities.

BlackBerry Work

BlackBerry
Access

BlackBerry
Workspaces

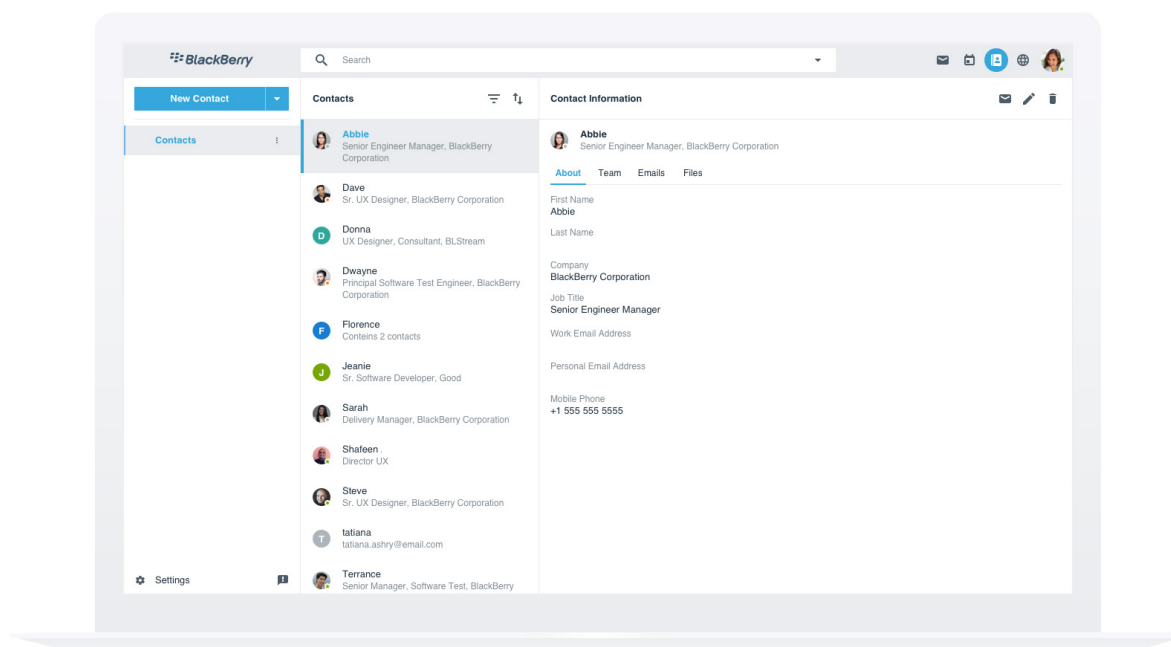

These solutions integrate with Microsoft Office 365 to provide enhanced collaboration and security.

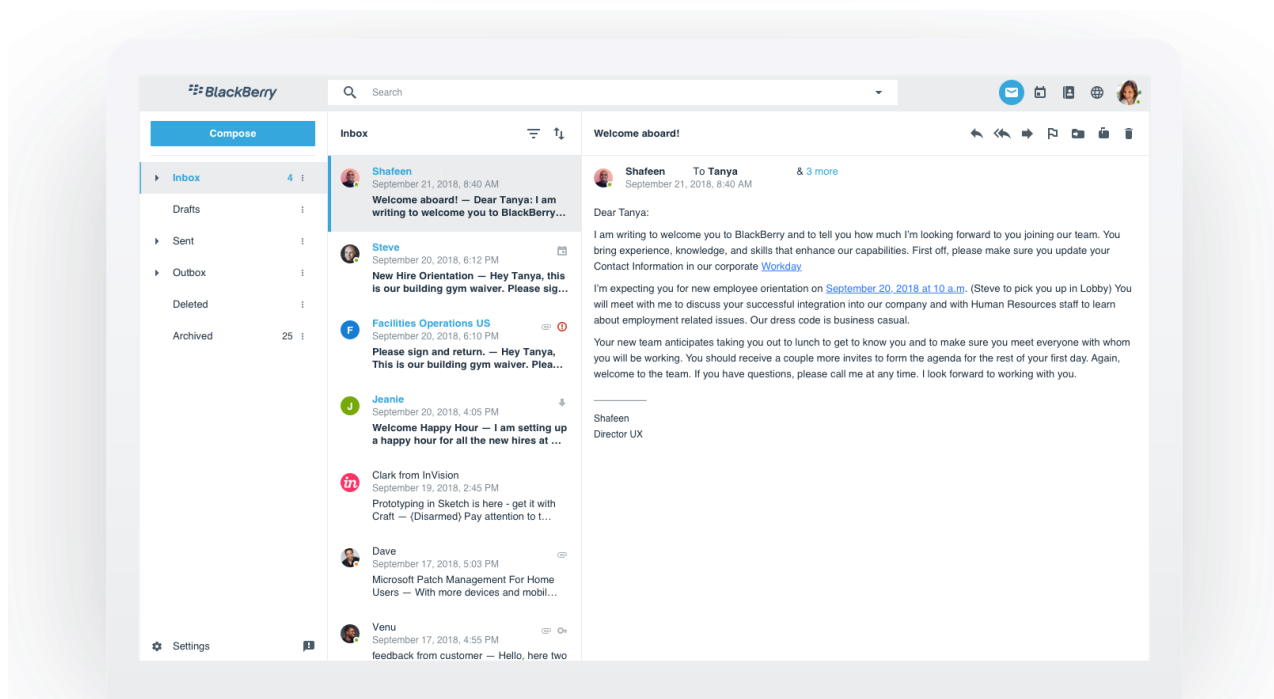

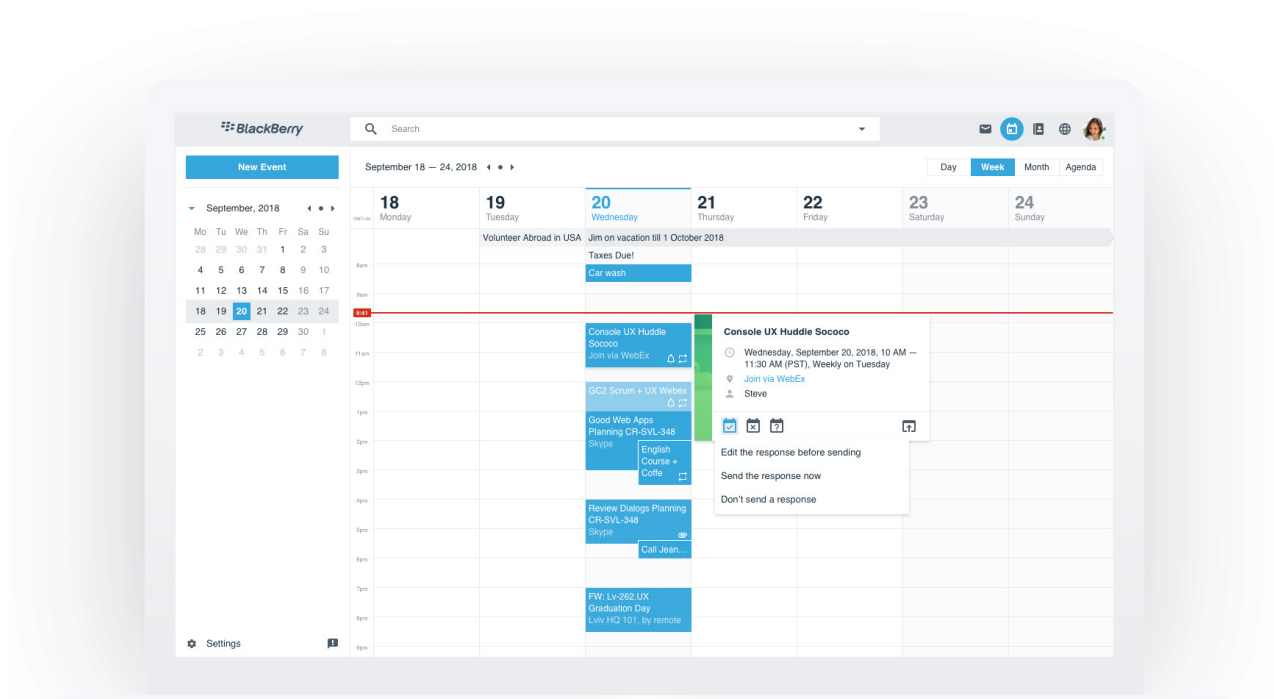

BlackBerry Work

Users can collaborate freely with business-focused capabilities:

- Read, send, and manage emails
- Schedule and open meetings from their business calendar
- View contact lists
- And more!

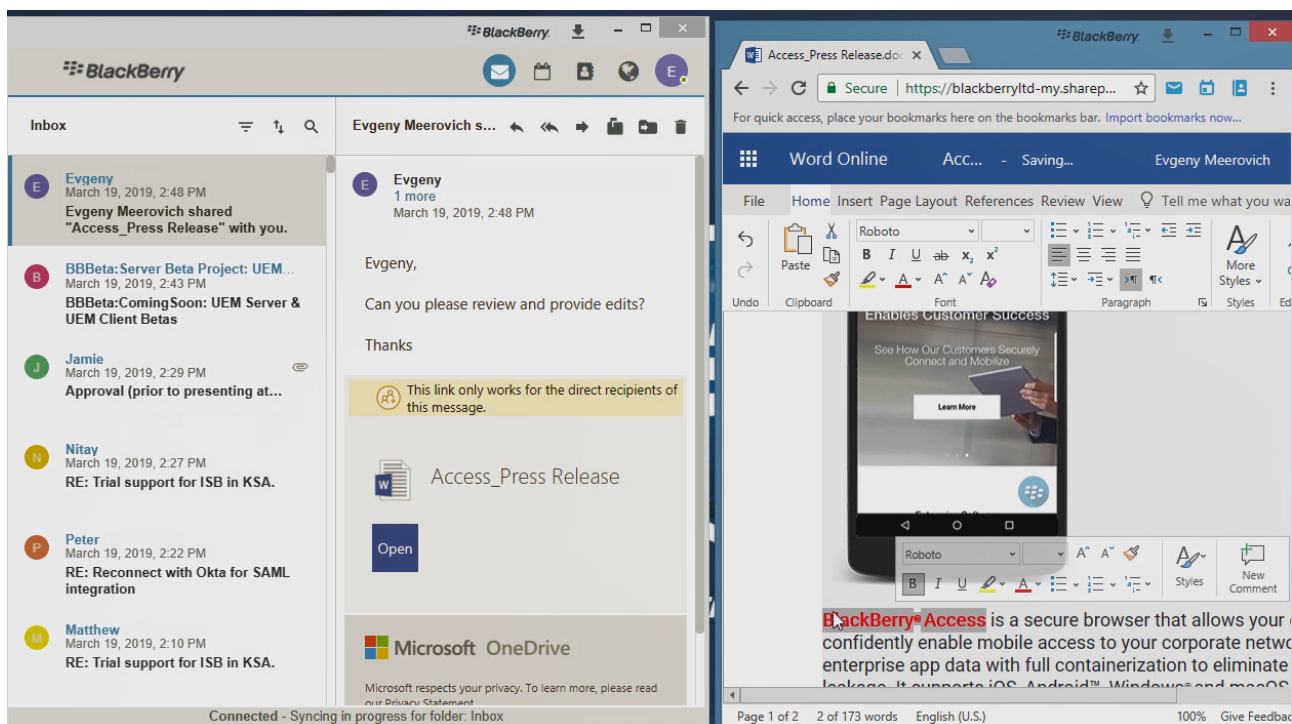

Access Your Microsoft Office 365 Applications Online

Users can easily access their Microsoft Office 365 apps online by seamlessly connecting to on-prem or cloud resources.

With just a couple of clicks, users can collaborate with:

- Microsoft Outlook: Email, calendar, contacts, tasks, and notes
- Content repositories: Microsoft SharePoint, OneDrive, and more
- Full Online Document Editing: Create and edit Microsoft Word, Microsoft Excel, and Microsoft PowerPoint files, and share them with colleagues

Securely Collaborate on Corporate Websites

BlackBerry Access enables users to securely enter and collaborate on corporate web apps. This gives users easy-to-access business resources such as internal portals, HR resources, and dashboards. By providing one-click access to these apps, users will have all resources at hand without limitations on discoverability or security.

Enterprises can configure Chromium extensions so that users can stay even more productive with the most commonly-used corporate applications, such as web conferencing, sales reporting (i.e. Salesforce), project management, and more.

With BlackBerry Access, users have offline access to the integrated BlackBerry Work app. They can collaborate on email, calendar, and contacts, and securely edit Microsoft PowerPoint and Microsoft Word documents without depending on Wi-Fi, using an embedded editor (SmartOffice by Artifex). Using this functionality, they can download, edit, and save Word and PowerPoint documents in the secure enclave of the BlackBerry® desktop app and be assured that their data remains secure.

A Unified Workspace with Awingu

Awingu is a browser-based workspace that enables access to Windows and Linux apps, desktops, corporate intranet, and SaaS and file shares. It can be used on any cloud and boasts a secure and audited gateway.

Partnering with BlackBerry, Awingu & BlackBerry Access offer “anywhere” access to any application, desktop and file and on any device through a secure and managed browser.

Awingu & BlackBerry Access

Securely access legacy Windows, Linux, & Web applications, desktops and files on any device, anywhere via the BlackBerry Access browser

Key Features

Aggregate Windows, Linux, Web and SaaS applications and desktops in **one workspace**

Proprietary **HTML5 experience** runs your apps in the BlackBerry Access Browser

Access and share company files securely from your browser

Full usage **audit**, anomaly detection, context aware login, granular control & MFA built-in

Runs on your existing infrastructure and built on open API

Benefits

Access Apps, desktops & files from **any device, anywhere** via the managed BlackBerry Access browser

Optimized security & compliance; no local data, full usage audit, Multi-Factor Authentication

Optimized TCO with attractive licensing models & simplicity to operate

Secure C/BYOD: Manage the browser, not the device

Simplicity is core

- Easy end-user adoption
- Simple addition to existing infrastructure

Platform Agnostic

- Keep control of your cloud choices
- Facilitate Windows 10 convergence

Secure & Compliant

- Manage the browser, not the device
- GDPR, HiPAA enabling

Convergence

- Accelerate desktop & mobile convergence
- Context awareness

Competitive TCO

- Up to 81% better TCO vs. competing solutions

Rich Policy and Access Controls for IT

With BlackBerry Access, IT can easily manage policy and access controls. IT can set up policies to ensure security, such as:

- “Whitelist” approved domains so that users can access corporate pages without compromising data
- Set different browser and app policies for different user groups
- Support server certificates and persistent credentials
- Enable strict tunneling or flexible traffic control

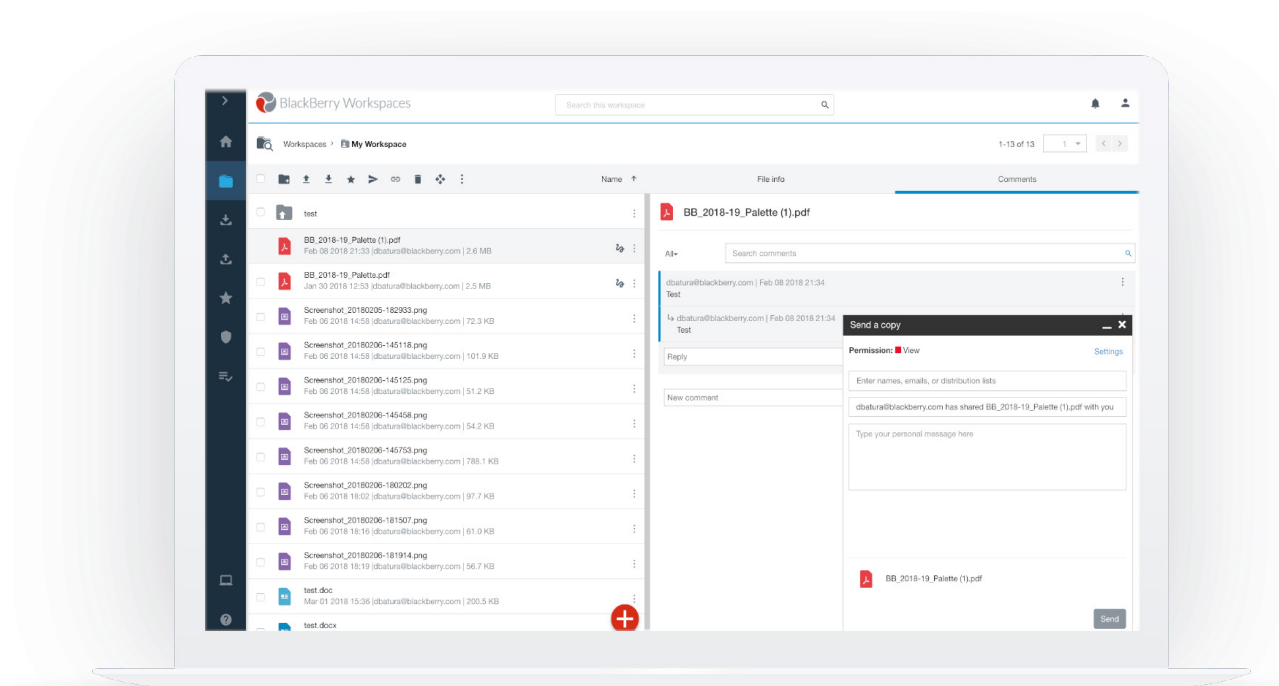

End-to-End Security with Data Path Controls

With traditional browsing, sensitive corporate data such as bookmarks, NTLM credentials or files may be exposed. BlackBerry Access uses Data Path Controls to securely route traffic thru the firewall, and at the same time keeps intranet and any SaaS data secure and containerized. Organizations can enable seamless connections for remote users to sensitive data sources while eliminating data leakage.

BlackBerry Workspaces for Enterprise-Grade File Sharing

With BlackBerry Workspaces, users can securely share files, both inside and outside their organization. It embeds digital rights management (DRM) protection into files, meaning you can control whether users are able to save, edit, copy or print the files.

By using the BlackBerry Workspaces desktop client app, application plugin, or website app for Windows 10 or macOS, users can access a suite of productivity capabilities, such as document editing in Microsoft Office native applications, file tracking and document permissions.

Three Easy Steps to Deploy

- IT deploys the application to users. Existing BlackBerry Dynamics infrastructure supporting iOS and Android can be seamlessly leveraged for supporting Windows 10 and macOS
- Users download the app on their Windows 10 or macOS device from www.blackberry.com/mobilityapps, and enter the access key to activate the app.
- With a single sign-on, users will now be able to access corporate intranet and business apps anytime, anywhere.

And when an employee leaves the company, IT can remotely wipe the BlackBerry Access app data from the user's laptop. The corporate data is now removed from the desktop while the user's personal data remains untouched.
