**FORM SD
SPECIALIZED DISCLOSURE REPORT**

BLACKBERRY LIMITED
(Exact name of the registrant as specified in its charter)

A6	001-38232	98-0164498
(State or other jurisdiction of incorporation or organization)	(Commission File Number)	(IRS Employer Identification No.)
2200 University Avenue East Waterloo, Ontario, Canada		N2K 0A7
(Address of principal executive offices)		(Zip code)
Randall Cook		(519) 888-7465 x66067
(Name and telephone number, including area code, of the person to contact in connection with this report.)		

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2018.

Introduction

Transportation and Asset Tracking hardware products manufactured on behalf of BlackBerry Limited (“BlackBerry”) in 2018 contain Conflict Minerals that are necessary to their functionality or production. BlackBerry did not source these Conflict Minerals directly. These Conflict Minerals underwent various processing steps by multiple parties along the supply chain before being manufactured into electronic components and materials by sub-tier suppliers of BlackBerry, and subsequently assembled into BlackBerry products via an electronics manufacturing services provider.

BlackBerry continues to recognize its shared responsibility in relation to the responsible mining and sourcing of minerals in conflict-affected regions of the world, including the Democratic Republic of Congo and its neighboring countries. In early 2012, BlackBerry first adopted and published its Responsible Minerals Policy, consistent with its existing Supplier Code of Conduct and the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas. In 2014, BlackBerry made enhancements to its Responsible Minerals Policy, which further exemplifies its commitment to responsible sourcing. The policy, available at: <http://www.blackberry.com/responsiblemineralspolicy>, establishes expectations within its supply chain that creates demand for responsibly sourced minerals used in BlackBerry's Transportation and Asset Tracking products.

Section 1 - Conflict Minerals Disclosure

Items 1.01 and 1.02 Conflict Minerals Disclosure and Report, Exhibit

Conflict Minerals Disclosure

BlackBerry has concluded in good faith that during the reporting period from January 1 to December 31, 2018,

- i) it has contracted to manufacture products in which “Conflict Minerals” (as defined in Section 1, Item 1.01 (d)(3) of Form SD) are necessary to the functionality or production of such products (“**Necessary Conflict Minerals**”); and
- ii) based on a “reasonable country of origin inquiry”:
 - a) a portion of its Necessary Conflict Minerals may have originated in the Democratic Republic of the Congo or an adjoining country (collectively referred to as the “Covered Countries”) and it has reason to believe that those Necessary Conflict Minerals are not from recycled or scrap sources; and
 - b) a portion of its Necessary Conflict Minerals has an unknown origin.

BlackBerry’s Reasonable Country of Origin Inquiry (RCOI) included a combination of measures to determine whether the Necessary Conflict Minerals in BlackBerry’s products originated from the Covered Countries. BlackBerry’s primary means of determining the country of origin of Necessary Conflict Minerals is based on surveying the manufacturers of the components and materials used in BlackBerry hardware products, BlackBerry’s “sub-tier suppliers.” Considering its remote position in the supply chain relative to the processors of Conflict Minerals, BlackBerry is very reliant on the survey results to complete the RCOI and support subsequent due diligence. BlackBerry received responses for the 2018 reporting year from approximately 82% of the manufacturers providing such components.

The survey results include the identities of the processors of Conflict Minerals necessary to the functionality or production of the components and materials manufactured by the sub-tier suppliers. BlackBerry then compared the identified processors (smelters and refiners) to the Responsible Minerals Initiative’s (RMI’s) Conformant Smelter Sourcing Information report to determine if the processors are sourcing conflict minerals which originated in the Covered Countries. The RMI Conformant Smelter Sourcing Information report contains non-public information collected by the RMI and the London Bullion Market Association (LBMA) while conducting their Responsible Minerals Assurance Process audits of smelters and refiners. Of special note is that 2018 was the first reporting year in which the LBMA shared country of origin information in aggregate form with the RMI for publishing in the Conformant Smelter Sourcing Information report. As a member of the RMI, BlackBerry is provided access to this report.

Some suppliers have included country of origin information with their survey responses. Additional country of origin information was also made available to BlackBerry through smelters and refiners, and other third-party or public sources.

BlackBerry evaluated the country of origin data as provided by the different sources for consistency and plausibility, using available information including published mineral production references to inform our final RCOI results.

Subsequent to the above determination, BlackBerry has filed a Conflict Minerals Report as Exhibit 1.01 hereto, which is publicly available at <http://us.blackberry.com/company/investors/corporate-governance.html>.

The foregoing disclosure is qualified in its entirety by reference to the Conflict Minerals Report filed as Exhibit 1.01 hereto, which is incorporated by reference herein.

Section 2 – Exhibits

Item 2.01 Exhibits

Exhibit 1.01 – [Conflict Minerals Report for the period January 1 to December 31, 2018, as required by Items 1.01 and 1.02 of this Form.](#)

* * * * *

BlackBerry Limited

CONFLICT MINERALS REPORT

**FOR THE REPORTING PERIOD FROM
JANUARY 1 TO DECEMBER 31, 2018**

INTRODUCTION

This Conflict Minerals Report for **BlackBerry Limited** (“**BlackBerry**”, “**Company**,” “**we**,” or “**our**”) is provided in accordance with Rule 13p-1 under the Securities Exchange Act of 1934, as amended, which implements Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, (the “**Rule**”) for the reporting period from January 1 to December 31, 2018.

The Rule imposes certain reporting obligations on U.S Securities and Exchange Commission (“**SEC**”) registrants whose manufactured products contain tantalum, tin, tungsten, or gold (defined by Item 1.01(d) (3) of Form SD as “**Conflict Minerals**”), that are necessary to the functionality or production of those products. If the SEC registrant has reason to believe that any of those Conflict Minerals may have originated in the Democratic Republic of the Congo or an adjoining country (“**Covered Countries**”), or is unable to determine the country of origin of those Conflict Minerals, the SEC registrant is required to submit a Conflict Minerals Report to the SEC that includes a description of the measures it took to exercise due diligence on the Conflict Minerals’ source and chain of custody.

Transportation and Asset Tracking hardware products manufactured on behalf of BlackBerry in 2018 contain Conflict Minerals including tantalum, tin, tungsten, and gold that are necessary to their functionality or production (“**Necessary Conflict Minerals**”). BlackBerry did not source these Conflict Minerals directly. These Conflict Minerals were typically commingled with minerals of varied provenance and then processed using chemical and/or thermal methods into purified metals and compounds. They are then either further processed and/or subsequently manufactured into components and materials by sub-tier suppliers of BlackBerry, and finally assembled into end products via an electronics manufacturing services provider.

For the reporting period from January 1 to December 31, 2018, BlackBerry conducted a Reasonable Country of Origin Inquiry (“**RCOI**”). A description of BlackBerry’s RCOI is included in Form SD. The results of our RCOI were as follows:

- a) a portion of our Necessary Conflict Minerals may have originated in a Covered Country and we have reason to believe that those Necessary Conflict Minerals are not from recycle or scrap sources; and
- b) a portion of our Necessary Conflict Minerals has an unknown origin.

The statements below are based on the due diligence activities performed to date and in good faith by BlackBerry and are based on the information available through the 29th of March 2019. There are factors that could affect the accuracy of these statements. These factors include, but are not limited to: incomplete supplier, smelter, or refiner data; errors or omissions by suppliers, smelters or refiners; evolving definition and confirmation of smelters and refiners; incomplete information from industry or other third-party sources, or aggregated data which is not wholly attributable to the parts, suppliers, smelters or refiners existing in BlackBerry’s supply chain.

DUE DILIGENCE MEASURES

We conducted due diligence on the source and chain of custody of the Necessary Conflict Minerals contained in products that we contracted to manufacture as described above to ascertain whether these minerals originated in a Covered Country and directly or indirectly financed or benefited non-state armed groups in any of these countries.

Design of Our Due Diligence Measures

With consideration of our scale and position in the supply chain, we have designed our Conflict Minerals due diligence measures to conform with the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Third Edition (2016) (the “**OECD Guidance**”), as applicable for tantalum, tin, tungsten and gold and for downstream companies (as the term is defined in the OECD Guidance), in all relevant material respects:

1. establish strong company management systems for Conflict Minerals supply chain due diligence;
2. identify and assess Conflict Minerals risks in our supply chain;
3. design and implement strategies to respond to Conflict Minerals risks identified;
4. contribute to independent third-party audits of the due diligence practices of Conflict Minerals smelters and refiners by participating in industry organizations; and
5. report on our Conflict Minerals supply chain due diligence activities.

Due Diligence Measures Performed

BlackBerry's due diligence measures during, and in support of, the reporting year included the following activities:

Step 1: Establish strong company management systems for Conflict Minerals supply chain due diligence

- 1) Implemented our Responsible Minerals Policy by conducting due diligence on the source of Conflict Minerals contained in BlackBerry's Transportation and Asset Tracking hardware products;
- 2) Maintained an internal team to advance BlackBerry's Conflict Minerals Program and implement our Responsible Minerals Policy;
- 3) Maintained BlackBerry EthicsLink as a grievance mechanism support tool for use by employees and third parties as a confidential means of reporting violations of our policies and monitored the Responsible Minerals Initiative (the "RMI") Grievance Report and discussions for any applicable issues; and
- 4) Maintained records associated with the implementation of BlackBerry's due diligence process in accordance with specified requirements (minimum 5-year retention).

Step 2: Identify and assess risk in the supply chain

- 5) Identified relevant sub-tier suppliers with the potential for providing materials, components, subassemblies, or finished goods containing at least one of the Necessary Conflict Minerals;
- 6) Requested relevant sub-tier suppliers to complete the RMI Conflict Minerals Reporting Template ("CMRT"), version 5.10 or later, to obtain updated sourcing and Conflict Minerals due diligence information about BlackBerry's supply chain, including the identification of smelters and refiners in the supply chains of BlackBerry's sub-tier suppliers;
- 7) Reviewed CMRT submissions for completeness and data credibility against BlackBerry criteria and third-party data sources; and
- 8) Used information: as submitted by suppliers in the CMRT; as provided by the RMI as a benefit of our membership; and as collected from other third-party sources to conduct an RCOI as described in BlackBerry's Form SD report.

Step 3: Design and implement a strategy to respond to identified risks

- 9) Escalated the identities of sub-tier suppliers who failed to provide credible sourcing data to BlackBerry commodity management; and
- 10) Provided due diligence guidance and communicated issues requiring corrective action based on assessments in Step 2 to relevant sub-tier suppliers.

Step 4: Carry out independent third-party audit of due diligence practices

- 11) Relied upon the due diligence conducted on smelters and refiners by the RMI's Responsible Minerals Assurance Process (the "**RMAP**"). The RMAP relies on independent private sector auditors to audit the source, including mines of origin and chain of custody of the Conflict Minerals used by smelters and refiners that agree to participate in the RMAP. The smelters and refiners that are found to be RMAP conformant are those for which the independent auditor has verified that the smelters and refiners have demonstrated responsible minerals sourcing and implemented systems in conformance with RMAP requirements; and
- 12) Maintained an active membership in the RMI and supported expansion of the RMAP to additional smelters and refiners by conducting the following actions:
 - a. Contributed to the RMI workgroup to maintain and enhance the CMRT;
 - b. Contributed to RMI activities to identify and engage new smelters and refiners and encourage their participation in the RMAP; and
 - c. Participated in efforts to revise the RMI audit standards

Step 5: Report on supply chain due diligence

- 13) As required under Section 13(p) of the Securities and Exchange Act of 1934, BlackBerry has filed a Form SD which includes this Conflict Minerals Report and made such information available on our website, demonstrating our progress in implementing our Responsible Minerals Policy.

Independent Private Sector Audit

This Conflict Minerals Report has not been subject to an independent private sector audit ("IPSA"). Per guidance issued by the SEC on April 29, 2014 and the related order subsequently issued on May 2, 2014, only issuers who describe their products as "DRC conflict free" are subject to an IPSA.

DUE DILIGENCE DETERMINATION

On the basis of the due diligence measures detailed above, which are on the source and chain of custody of the Conflict Minerals in BlackBerry's products, BlackBerry describes the following products as "DRC Conflict Undeterminable" *:

Product Category
BlackBerry's Transportation and Asset Tracking hardware products

*DRC conflict undeterminable products are those for which we were unable to determine that such products do not directly or indirectly finance or benefit armed groups in Covered Countries.

Facilities Processing Conflict Minerals

As described in Form SD, BlackBerry compiled the list of facilities processing Conflict Minerals (smelters and refiners) by surveying the manufacturers of the components and materials used in BlackBerry products. The survey responses were either specific to the components used in BlackBerry products or represented a broader segment of the manufacturer's portfolio. The latter could result in the over-reporting of smelters and refiners (i.e., the inclusion of smelters and refiners who supply conflict minerals to the manufacturer for use in components and materials not actually used in BlackBerry products).

A summary of the status of the smelters and refiners which have been reported by these manufacturers, is provided in Table 1. The smelters and refiners are listed in Table 2. Facilities reported by manufacturers who do not meet the RMI's definition of a refiner or smelter are not included in these tables.

Conflict Mineral	Total	Conflict-Free Status**	
		DRC Conflict-Free	Unknown
Gold	139	101 (73%)	38 (27%)
Tantalum	39	39 (100%)	0 (0%)

**Based on RMI's Responsible Minerals Assurance Process (the "RMAP") results through March 29, 2019. Facilities which are reported to be conformant to the RMAP or equivalent program are reasonably assumed to be "DRC Conflict-Free". "DRC Conflict-Free" does not include facilities designated by the RMI as "Active" or any other status. In 2018, four of the smelters and refiners reported by suppliers were designated as "Non Conformant" by the RMI for failing to undergo routine or follow-up audits within the required time-frame. Based on available evidence, none of the four source raw materials from the covered countries and could reasonably be assumed to be "DRC Conflict-Free", however, lacking conclusive information such as RMAP audit completion they have been labeled as "Unknown" in this report.

Countries of Origin of Conflict Minerals

By conducting a Reasonable Country of Origin Inquiry as described in Form SD, BlackBerry established a list of countries, provided in Table 3, from which the facilities listed in Table 2 may be sourcing Conflict Minerals. BlackBerry has no specific knowledge linking the Conflict Minerals originating in any specific country to the metals present in any of its Transportation and Asset Tracking hardware products. To protect the confidentiality of minerals sourcing by smelters and refiners, the Responsible Minerals Initiative (RMI) and London Bullion Market Association (LBMA) in almost all respects have aggregated country of origin data. Being the primary source of the information in this table, the provision of data in this manner by the RMI and LBMA results in considerable uncertainty when correlating specific countries to specific smelters and refiners, and subsequently BlackBerry products.

Efforts to Determine the Conflict Minerals' Mine or Location of Origin

BlackBerry's efforts to determine the conflict minerals' mine or location of origin included two approaches: (i) use of the CMRT as a method to query and transmit sourcing information along the supply chain; and (ii) reliance on, and support for, the RMAP as an independent third party audit solution through which mineral sources are identified and independently evaluated.

The CMRT helps a company to identify the smelters and refiners within its supply chain and their sources of minerals. The use of the CMRT by industry participants is dependent upon each tier in the supply chain collecting information from its direct suppliers and passing it on to customers. The amount of detail and quality of data being collected by this process is improving; however, considering the number of tiers within BlackBerry's supply chain, we expect that several reporting cycles will be needed to complete the data collection.

Mineral sources are valuable intellectual property for most smelters, and the OECD Guidance acknowledges that reporting of information may be limited by concerns of business confidentiality. An independent third-party audit solution such as the RMAP can offer an efficient means to address these confidentiality concerns and to help promote the reliability of information collected. BlackBerry has therefore incorporated reliance on the RMAP as an element of its due diligence process. Through the course of the RMAP smelter assessment process, independent auditors review information on the mines of origin for the smelters and refiners. To be conformant with the RMAP, smelters and refiners must have disclosed the identities of their mines or locations of origin to the auditors, and the auditors must have independently validated that sufficient evidence exists to support the sourcing claims and that those sources are DRC conflict-free.

BlackBerry is a member of the RMI and is very active in supporting the implementation and expansion of the RMAP on multiple fronts.

Steps to Improve Due Diligence

BlackBerry is committed to being a socially and environmentally responsible corporation, within our own activities and through those in our supply chain. Despite our scale and position in the supply chain, we expect to continue to engage with relevant manufacturers and the broader industry to improve our due diligence on the source and chain of custody of the Necessary Conflict Minerals.

We intend to continue impressing upon the manufacturers our expectation that they apply the OECD Guidance in good faith. We also expect to continue to focus our efforts working with industry peers through the RMI to improve the systems of transparency and control and leverage those systems within our own supply chain.

Although circumstances may change necessitating an adjustment of plans, specific steps we are contemplating to further improve our reasonable due diligence in 2019 include:

- 1) Providing additional guidance for relevant manufacturers on Conflict Mineral reporting and the OECD Guidance;
- 2) Further enhancing our messaging regarding the use of RMAP, or equivalent, validated smelters and refiners;
- 3) Using the updated CMRT and latest smelter lists for collecting due diligence information from relevant manufacturers;
- 4) Continuing our participation in the RMI, including the verification and engagement of smelters and refiners in the RMAP;
- 5) Reviewing our Responsible Minerals Policy for opportunities to expand our expectations for responsible minerals sourcing both within and beyond conflict-affected areas and revising as appropriate;
- 6) Monitoring for the development of new or changing legislation; and
- 7) Encouraging the responsible sourcing of minerals from the Democratic Republic of Congo and adjoining countries.
