

BlackBerry Unified Endpoint Manager

Complete Multi-OS Control for
Secure Productivity

BlackBerry UEM

BlackBerry® UEM delivers unified endpoint management and policy control for your diverse and growing fleet of devices and apps. With its single management console and trusted end-to-end security model, it provides the flexibility and security you need to keep your employees connected and protected.

The Solution

Secure and manage mobile devices, laptops and other endpoints across different operating systems and ownership models. Control user access to business apps, data and content. And do it all from a single, easy-to-use management console, with an extensive set of policies and profiles to suit your needs.

An Enhanced User Experience: BlackBerry UEM opens a world of choice for your users. With support for a wide array of platforms, including iOS®, Android®, Windows 10®, macOS® and BlackBerry®, your employees can use the tools they prefer for productivity, without sacrificing security. A consistent, user-friendly enrollment process ensures that your users can quickly and securely gain access to essential work apps and resources. And a unified self-service portal enables your employees to easily complete common tasks, such as activating new devices or business apps, without having to depend on IT assistance.

A Unified, Intuitive Management Console: BlackBerry UEM provides administrators with a single pane of glass to easily manage policies across endpoints, apps, identity and content. In addition to a comprehensive set of policies and configuration profiles, BlackBerry UEM administrators can set granular controls on secure line-of-business apps built on BlackBerry® Dynamics™, extend single sign-on to cloud services via BlackBerry® Enterprise Identity, and control and track access to enterprise content via BlackBerry® Workspaces. With BlackBerry UEM, IT gains unprecedented control over the entire mobile estate from a single solution.

Industry-Leading Enterprise Security: For enhanced security, BlackBerry UEM offers comprehensive management for native container solutions such as Android™ for Work and Samsung Knox™ Workspace, in addition to native protection capabilities such as iOS® Managed App Configuration and Windows Information Protection. And to help your employees stay productive on the go, BlackBerry® Connectivity, powered by BlackBerry's global secure communications infrastructure, securely extends mobile access to work resources located behind the firewall – without a separate VPN.

Flexible, Extensible, and Ready to Evolve: To better enable your organization, BlackBerry UEM integrates with many of the most common enterprise IT solutions. In addition to connecting with your Microsoft® Active Directory® or LDAP directory, it can manage access for Microsoft® Exchange ActiveSync® (including Microsoft® Office 365®), integrate with your organization's PKI infrastructure, or restrict access to network resources through integration with Cisco® ISE. As your needs evolve, you can also manage further BlackBerry capabilities to support enhanced collaboration, custom app development, identity and access management (IAM), or digital rights management (DRM) for secure file sharing.

Low Total Cost of Ownership: By converging device, app and content management for mobile devices with core management functions for traditional endpoints, BlackBerry UEM can help organizations streamline administration, enhance compliance, and reduce complexity. And with flexible, subscription-based licensing for both on-premises or cloud-based deployments, you can avoid high up-front costs and retain the flexibility to scale up or down as your needs change.
