

# Create Your Unified View for Mobile Access

## SECURE, MOBILIZE AND SHARE FILES.

Many organizations have numerous files accumulated in Microsoft SharePoint, Windows File Shares or other Enterprise Content Management solutions. The challenge? Bridging the new world order of external file sharing and mobile content management with the large volume of existing, business-critical content stored in these sites.

BlackBerry Workspaces™ Content Connectors provides this bridge, enabling organizations to leverage their investments in existing infrastructure and user training by extending SharePoint, Windows File Shares and others CMS solutions. With Workspaces Content Connectors, enterprises can now manage all of their corporate content through a “single pane of glass” or unified view for Enterprise File Sharing, Mobile Content Management and Collaboration.

## Empower Users with Secure Mobile Content

Through the combination of Workspaces Content Connectors and Mobile Apps, a Chief Financial Officer can securely access board presentations in a SharePoint library through her personal iPad. Similarly, an independent insurance agent can watch a training video file offline that is stored in a Windows File Share. And a financial analyst can view a financial spreadsheet on SharePoint through the Workspaces Mobile App.

Workspaces is architected specifically to address the multi-tier needs of the mobile worker. Users can also annotate any file type and also save content edits back – all within a single secure and trusted mobile app.

The same CFO can make annotations on the board presentation, and the financial analyst can make edits to the spreadsheet and save it back to SharePoint – all with safe and trusted tools from BlackBerry.

Edit and Save from Mobile Devices to SharePoint and File Shares

## Securely Extend Enterprise Files to External Partners

Files also need to be shared with customers, business partners, or industry regulators.

With Workspaces Content Connectors, audit spreadsheets for regulators can be shared from a SharePoint library, product design specifications in File Shares can be made available to outsource manufacturers, and training videos can be shared with business partners.

Through Workspaces Content Connectors, in addition to basic file access controls, the Enterprise File Sharing controls that are unique to Workspaces can be applied as needed. Logging and controls such as "Online-view" or "Tracked view & print" for an encrypted and DRM-protected product design document can be applied as needed when SharePoint and File Share files are made available to external users.

### Architected for the Enterprise: No File Replication, No Additional Cost and No Additional Fuss

Workspaces Content Connectors support business of all sizes. Enterprise organizations may have tens of SharePoint Sites, hundreds of libraries, and petabytes of files that they want to connect to Workspaces. Workspaces Content Connectors require neither migration nor replication of files in SharePoint and File Shares. Workspaces' unique architecture supports multiple sites or shares – but you can also opt to connect certain libraries or folders. Either way, you'll avoid additional storage costs.
