

# Secure Enterprise File Sync, Sharing and Content Collaboration

BlackBerry Workspaces™ makes enterprises more mobile and collaborative, while reducing the risk, complexity and cost of sharing information across and beyond your organization. Workspaces provides file-level encryption and user access controls, so you maintain control over your content even after it leaves your firewall. Workspaces also embeds digital rights management (DRM) protection in your files, so you can control what the recipient is able to do with the file once they gain access to it.

Workspaces provides file security while increasing the productivity of your organization. Users are able to view, edit, comment and collaborate on files on all major device platforms. Our deep integration with Microsoft Outlook, Microsoft Office, Office 365 and OneDrive means that your employees can continue to use their existing apps and workflows while seamlessly integrating Workspaces file secure sharing.

Workspaces allows your employees to work more effectively and safely with outside contributors. This is critical in a world where core business operations are being outsourced and vendor, partner and customer ecosystems are growing rapidly. Workspaces flexible security policy model allows you to create secure collaborative workspaces, control access and assign file permissions at the user, group and domain level. You can extend your security perimeter outside your firewall and collaborate with outside users without risk of losing control of core IP or exposing sensitive information such as personnel records or product designs.

Only Workspaces delivers the features users want and the control that IT needs.

# Secure, Mobilize and Share Files

## The Functionality Users Want

- ✓ **Share Files:** Workspaces allows you to create workspaces for ongoing collaboration or simply share a link to a file via email, messaging or other means
- ✓ **File Synchronization:** The latest version of a file is automatically synced to and available from all the user's devices.
- ✓ **Mobility:** Access, synchronize, share and control files on all platforms: web, mobile (iOS, Android™, BlackBerry® 10), and desktop (Windows®, Mac®).
- ✓ **Productivity:** Access, create, edit, annotate (highlight, comment, draw, erase), search (folders, files and content) and share files on any device.
- ✓ **Internal and External Collaboration:** Share files with anyone (internal and external), anywhere, on any device, without losing visibility or control.
- ✓ **Large File Transfer:** Share extremely large files with colleagues, partners and third parties easily.

# Protect, Externalize and Track Files and File Usage

## The Functionality IT Needs

**File-Level Security and Enforcement:** Keep sensitive files encrypted and controlled - at rest, in transit and on the device - reducing the risk of a breach or loss of intellectual property. Apply dynamic watermarks or use the spotlight feature to deter screenshots and increase accountability. Track, revoke, wipe or expire file access at any time - even after the document has left your security perimeter.

**Authentication and Encryption:** Enforce enterprise-level security policies including mobile passcode, jailbreak detection, remote document control, always-on AES-256 encryption (in transit, at rest, and in use) and advanced key management (optional HSM).

**Easy-to-Use DRM Controls:** Restrict what users and recipients can do with a file. Easily set and manage users' permissions to download, edit, copy, print and share Microsoft Office, PDF and image files.

**Visibility and Reporting:** Workspaces tracks all file activity so you know WHO, did WHAT, WHEN and WHERE they did it and WHAT DEVICE they used. This data is archived within Workspaces and can be used to monitor intrusions in real-time or to provide compliance reporting on demand.

**Flexible Deployment Options:** Choose to deploy BlackBerry Workspaces in the cloud, on-premises or as a hybrid solution.

**Integration and Secure Access:** Workspaces provides connectors for Microsoft content repositories (SharePoint, SharePoint Online, OneDrive for Business) and Windows File Shares (CIFS) as well as any CMIS-compliant data store such as OpenText, Alfresco, HP Trim, IBM FileNet and many others. This allows you to mobilize, externalize and share documents from your existing repositories securely and within your existing infrastructure. There's no need to migrate your files to the cloud or onto someone else's servers.

**Integration with BlackBerry Dynamics:** BlackBerry® Dynamics™ and BlackBerry® Workspaces provide a unified, seamless user experience. From the Dynamics Work app, users can:

- ✓ Browse the Workspaces secure file repository
- ✓ Select and open files stored in the Workspaces
- ✓ Save files and email attachments into Workspaces

**Ransomware Recovery:** Workspaces provides a method for quickly responding to and recovering from Ransomware attacks. Unlike other EFSS solutions, Workspaces helps to contain and limit the damage of Ransomware attacks by freezing the accounts of affected users. It puts tools in the hands of the system administrator that enables them to quickly recover and repair the damage from an attack. Workspaces is the only solution that provides fine-grained controls that allow the administrator to selectively target and address infected files without impacting clean files.

# Choose the Edition That Meets Your Needs

## Send

Personal sync and share for everyone, with secure file storage and multi-platform synchronization.

- ✓ Ability to view, edit and annotate documents securely on any device
- ✓ Personal workspace for storage, sync and sharing
- ✓ Apps for Windows®, macOS, Android™, iOS and HTML5-compliant browsers
- ✓ Plug-ins for Microsoft® Outlook® and Office Online
- ✓ End-to-end file encryption and user access controls
- ✓ View-only sharing
- ✓ Cloud deployment

## Collaborate

Enterprise file sharing solution for collaboration, organizational productivity, and enterprise security.

- ✓ Everything in "Send", plus:
- ✓ Group workspaces
- ✓ Unlimited data storage
- ✓ Collaboration and productivity tools
- ✓ Advanced admin console with usage reporting
- ✓ Enhanced security features
- ✓ Single Sign-On and Active Directory support
- ✓ Cloud or On-prem deployment

## Secure Plus

Highest level of security and file protection, as well as integration with existing file repositories, enterprise apps and workflows.

- ✓ Everything in "Collaborate" plus:
- ✓ Content connectors for SCM and file system integration
- ✓ Full DRM capabilities
- ✓ Advanced productivity tools
- ✓ API/SDK access
- ✓ Advanced user administration
- ✓ Cloud, On-prem or Hybrid deployment

## Workspaces in the Enterprise

Virtually every business has sensitive information and documents that need to be shared. Hundreds of global companies in nearly every industry have deployed Workspaces for a wide variety of use cases:

- ✓ Replace consumer-grade file sharing systems with a secure alternative
- ✓ Securely mobilize patient health records and allow doctors to access them anywhere, from any device – all while meeting HIPAA compliance requirements
- ✓ Securely share sensitive personal information within the company and with outside vendors and agencies – contact information, credit and financial information, fingerprints, background checks, etc.
- ✓ Protect intellectual property, such as blueprints, product specs, formulas, scripts and screenplays while providing controlled access to upstream and downstream partners
- ✓ Enable executives and board members to securely view, edit and annotate highly sensitive documents on their personal iPads and other devices
- ✓ Exchange files through secure data rooms for M&A and other business transactions
- ✓ Integrate with SharePoint, Windows file shares (CIFS) or any CIMS-compliant content management system to leverage existing investments and get a single view of all content
- ✓ Extend compliance reach to mobile devices and external collaborations – for SOX, PCI, HIPAA, FINRA, GLBA, 21 CFR Part 11, ITAR, POPI and other information security regulations

## Enabling Technology Transformation, Securely

BlackBerry Workspaces was built to secure information in the collaborative and mobile world of modern IT. It is designed to provide the granular, flexible and powerful security required by IT, while still delivering an elegant and intuitive user experience across web browsers, desktops, mobile devices and tablets.

Where endpoints, networks and technology infrastructure fall short in providing persistent protection, Workspaces uniquely controls and tracks all sensitive corporate assets wherever they go in the course of business.

## About BlackBerry

BlackBerry is an enterprise software and services company focused on securing and managing IoT endpoints. The company does this with BlackBerry Secure, an end-to-end Enterprise of Things platform, comprised of its enterprise communication and collaboration software and safety-certified embedded solutions.
