

SecuSUITE for Government: Secure Mobile Voice Communication for Android and iOS

Secure Communications

In today's high tech environment, communications are constantly at threat from enemies in the cyber shadows. These enemies have made it clear: the weakest link on mobile is voice. If you share confidential information using your smartphone or over conference calls, you need to be sure that your communications aren't being tapped. That's where SecuSUITE® for Government comes in.

BlackBerry's SecuSUITE® for Government solution eliminates this vulnerability by arming workers with a certified encrypted voice and text solution. Available on iOS® and Android™, it connects calls quickly, keeps them secure, and ensures excellent voice quality. Staff can communicate securely over voice and text within their organization across all carriers and WiFi, whether at home or abroad - where the threat of interception is extremely high.

Major Benefits

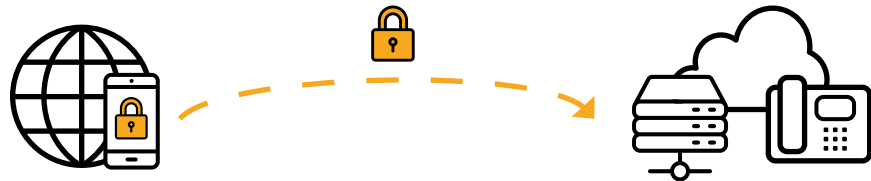

- ✓ **Secure encrypted voice and messaging**
- ✓ **Government grade performance and security**
- ✓ **Cross platform solution for iOS & Android integrated with secure landlines**
- ✓ **Superb voice quality**
- ✓ **Easy deployment of self-containerized app**

Licences purchased and servers set up on-premise¹

2. Admin Set-up

Customer admin enrolls users via portal

- Name
- Email
- Mobile number

3. Activation

User receives activation key.

- App download link
- Activation key
- App pushed via MDM (Optional)

4. Download

User enters activation key

5. Roll-Out complete

SecuSUITE for Government is ready for use

1. Cloud deployments also available.

About SecuSUITE for Government

SecuSUITE® for Government mobilizes secure voice and text communications. Part of BlackBerry® Spark™, a comprehensive endpoint-to-endpoint approach to security, it protects against threats to local and national security by enabling secure unclassified and classified mobile communications on conventional mobile devices.

SecuSUITE® for Government is a cross-platform solution for end-to-end encryption of voice and text messaging. With SecuSUITE® for Government, your voice and text communications are BlackBerry® Secure™.

Available on iOS® and Android™ devices, its calls connect quickly and provide excellent secure voice quality. It works globally, across barriers and across all carriers. Deployed securely on premise (or hosted in a trusted offsite data center), it can be managed centrally, and end users can be enabled over the air.

Whether workers are stationed locally or abroad, SecuSUITE® for Government mobilizes secure voice and text communications to protect against threats to security at all levels; Unclassified, Sensitive but Unclassified, Secret and Top Secret communications.
