BlackBerry Intelligent Security

iOS

macOS

Most unified endpoint management products on the market, including BlackBerry® UEM, place a policy on the device or within the application that tells the device or app what the security policy should be. While this works, it is very rigid, such that you would have the same profile when working at the office as you would when traveling.

Wouldn't it be better if the security policy could relax when you are at the office, or change dynamically if you are travelling in a higher-risk location?

BlackBerry® Intelligent Security solution, built on the BlackBerry Spark Platform, solves this problem with what we call "analytics-driven" security. BlackBerry Intelligent Security models the unique BlackBerry analytics data that is derived from our secure containers and our NOC combined with spatial data to determine a real-time risk score that adapts the security policy for the user to create the best experience.

Risk Score Factors: How it Works

In addition to the adaptive policy, the Machine Learning capability of BlackBerry Intelligent Security enables the system to identify behavioral and location patterns of multiple users to determine location risk. For example, if the system identifies repeated patterns of large clusters of employees in the same location it can automatically determine that as a work location, or if the business chooses to, it can preload known locations.

With Continuous Authentication, BlackBerry Intelligent Security uses in-app behavior analysis to recognize typical app usage patterns within BlackBerry® Dynamics Applications and determine if any specific in-app actions are high or low risk in real time. The usage-based patterns include time of day and how the user is using the app, for example forwarding internally vs. externally.

BlackBerry

BlackBerry Intelligent Security uses a range of other factors to decide what level of access should be granted to an employee or contractor profile at any given moment, such as:

✓ **Behavioral location:** BlackBerry Intelligent Security looks at the frequency and patterns of users, based on predictive analysis of anonymized location data to determine a location-based risk score.

✓ **Network Trust:** BlackBerry Intelligent Security determines the frequency of network use and adjusts security dynamically based on that profile. Accessing a public Wi-Fi for the first time would adjust the risk score accordingly.

✓ **Time & Usage Anomalies*:** BlackBerry Intelligent Security integrates seamlessly with other identity providers and systems as BlackBerry's proven security infrastructure to enable all data to be securely and easily shared.

✓ **Device and App DNA*:** BlackBerry Intelligent Security has the ability to determine whether the Device and Apps are compliant and up to date, and can adjust the security policy based on the Device and App DNA profile.

Using BlackBerry Intelligent Security, IT can dynamically adapt the security requirements and behavior of enterprise devices and apps to each user's real-world experience.

Risk Score Analysis: Dynamically Adopt the Security Requirements

BlackBerry Intelligent Security has the unique capability to grant access and issue authentication challenges based on real time risk analysis, enhancing end user experience and productivity without sacrificing security policies. Based on real time risk score analysis, BlackBerry Intelligent Security can:

• Grant Access
• Adopt a Policy
• Issue an Authentication Challenge
• Alert & Remediate

BlackBerry Intelligent Security dynamically adapts the security and policy posture and will apply remediation when needed. This allows the user experience and security/policy posture to be mutually and dynamically optimized, versus in conflict.

BlackBerry Intelligent Security Benefits

Increased Endpoint Security

- ✓ Decreases the risk that comes with lost devices
- ✓ Ensures that devices/app cloning is virtually impossible
- ✓ Detects and remediates behavior that can lead to data loss - whether intentional or not

Enhanced End User Experience

- ✓ Adapts security and policy posture to actual context, versus applying only static policies
- ✓ For example, enabling "zero sign-in" and/or increasing timeouts if it is a low-risk pattern in high-trust location

Improved Productivity and Reduced Cost

- ✓ Streamlined access to apps and services for users
- ✓ Builds on existing investments in BlackBerry® UEM. BlackBerry® Dynamics™, and BlackBerry EID

BlackBerry Intelligent Security Consultancy Service

BlackBerry will take the time to understand your unique business objectives and priorities, working to understand your business model and how you make money. BlackBerry will then help you build the right cybersecurity strategy from the ground up, mitigating your cybersecurity risk without disrupting employee productivity, product usability, customer convenience or other business-critical outcomes.

The BlackBerry Intelligent Security Consultancy Service provides you with the expertise and experience of our team of cybersecurity consultants who will enable policy development in line with the BlackBerry Intelligent Security capabilities. The consultancy service will guide you in understanding your threat surface and attack vectors in the current threat landscape, enabling maximum benefit from BlackBerry Intelligent Security.
