Better Security. Fewer Resources.

Cyberattacks are increasing. Whether you're a big, small, or medium-sized business, you're a target. Put the pressure on the attacker, not on your security team.

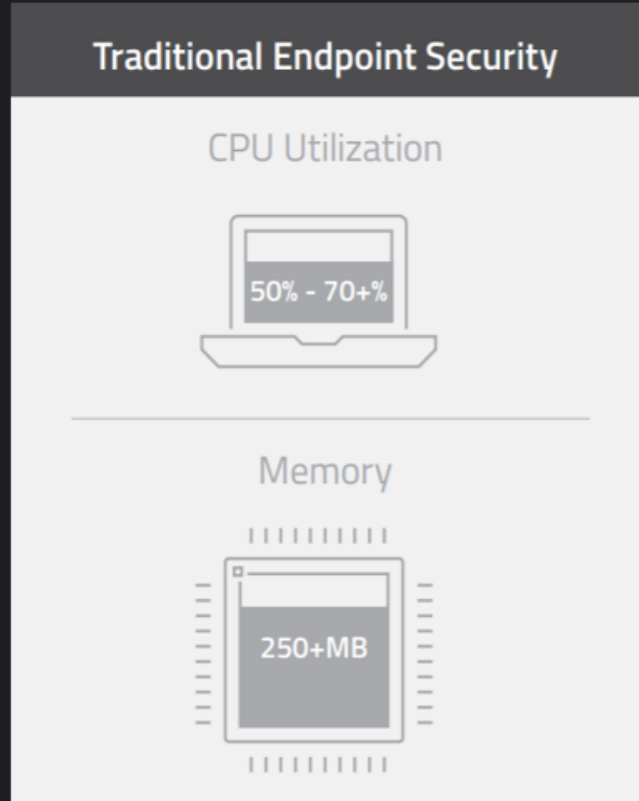

Is your business experiencing these cybersecurity challenges?

- Resource constrained
- Lack of cybersecurity expertise
- Limited discretionary budget
- Unable to manage complex security measures
- Slow system performance

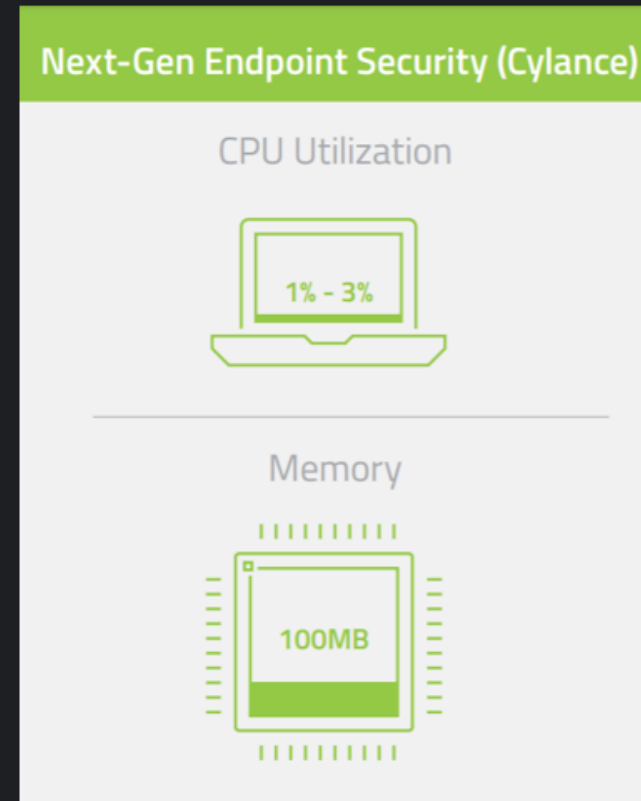

THE FUTURE OF SECURITY

Traditional Security Hurts Performance Drives Up Costs

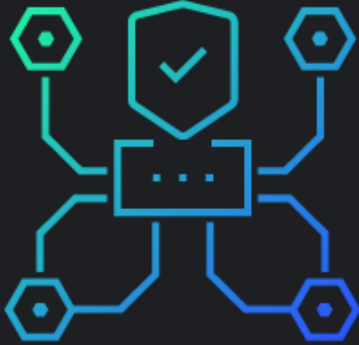

- CPU Utilization: 50-70+%
- Memory: 250+MB

- CPU Utilization: 1-3%
- Memory: 100MB Highly light weight & low impact

Cybersecurity Can Be Headache Free

Simple to Deploy

Cylance solutions provide a predictive, pre-execution defense against new and existing threats. Our AI driven technology is deployed at the endpoint where it silently stops malware attacks with minimal user impact, and without requiring specific security expertise.

Easy to Manage

CylancePROTECT evaluates objects in less than 100 milliseconds and prevents execution immediately upon detection. Our intuitive cloud-based management console allows you to easily configure/adapt and monitor your protection status, without requiring signatures or a cloud connection.

Cost-Effective Protection

AI-based protection saves you time and money with no daily scans to bog down performance, or heavy expert requirements to install and maintain the solution. Cylance protection catches threats before they execute and damage or destroy important assets.

Modern Approach to Security

- ✓ Provide maximum protection for data and systems
- ✓ Deliver this protection without inhibiting performance
- ✓ Offer cost savings and other strategic benefits
- ✓ Less intrusive
- ✓ Automation

Thankyou
