

Medical References for BlackBerry Handhelds

Beiks provides essential medical references for every field operative such as the Stedman's Medical Dictionary, the Pocket Drug Handbook, the Emergency Response Guides and many others. An indexed list of tokens is presented to the user, which updates with every letter entered to facilitate the search. Once found, the article for that term is displayed in full screen, with the ability to cross-reference and make notes. All data resides on the BlackBerry handheld itself, turning it into a standalone mobile medical library.

Beiks medical references for BlackBerry loads your field operators with essential reference knowledge in the field with a medical dictionary, drug reference guide, emergency response guide and a guidelines book. The medical references increase ROI and allow you to get more out of your BlackBerry handheld. Increases productivity while decreasing support/maintenance costs by switching to always-available electronic references rather than heavy immobile paperbacks. From industry-wide brand medical dictionaries to narrowly focused drug guides to EMS procedure codes, Beiks has the technology and, through its partners, possibly the content you need to empower your field workforce.

- Provides essential medical references from brand publishers in the field like LWW and Merriam-Webster.
- The solution is mobile, reliable, fast and economic as it resides on your BlackBerry handheld and weighs little, but is always available, whether in coverage or not.
- Increases the productivity of mobile users, as it is extendable with more content upon request.
